ITRC20121226-15	Upper Skagit Valley Casino Resort	WA		Electronic	Business	Yes - Unknown #	0

I am writing to inform you that on November 29, 2012 the Skagit Valley Casino Resort learned that an incident involving one of its vendors, Bally Technologies, Inc. ("Bally"), may have involved your personal data. Electronic equipment in Bally's possession in the normal course of business for the purposes of performing services for us, was stolen from a Bally employee's home office and may have contained data of our customers. The customer data may have included your name, driver's license number, social security number, and bank account information.

ITRC20121226-13	Vidant Pungo Hospital	NC		Electronic	Medical/Healthcare	Yes - Published #	1,100

The purpose of this notice is to inform certain individuals of a data security incident involving personal information. Specifically, the paper jackets that held one or more old radiology films were improperly discarded with office trash, picked up by a sanitation company, and disposed of in a landfill. The information contained on the paper jacket was limited to name, address, date of birth, age, sex, race and the date and name of the radiology procedure prior to May of 2012. The radiology films themselves were not disclosed, nor was any financial information.

ITRC20121211-06	<b>Workers United</b>	US		Electronic	Business	Yes - Unknown #	<b>0</b>

I write on behalf of Workers United to inform you of a potential security incident that involved the personal information of approximately 6 New Hampshire residents.

On October 25, 2012, Workers United was informed by an independent contractor that a hard drive containing certain retiree personal information had been stolen from the contractor's office. The theft is believed to have occurred on October 13 or 14, 2012. The hard drive included a database containing personal information of some former Workers United members, including but not limited to their first name, last name and Social Security number. At this time Workers United has no evidence indicating that any personal information was accessed by unauthorized persons or misused.

Officials at Colorado's Memorial Hospital are currently investigating reports of data theft. According to NBC affiliate KOAA, the hospital announced on November 6 that 6,400 documents containing patient's personal information were stolen from the facility. Although there hasn't been any proof of people using the documents for illicit purposes, hospital security management officials would still like to be able to track down the documents and provide patients with peace of mind. Each of the stolen documents contain the patient's name, hospital account numbers, birth dates and the type of lab work that was completed.

4Access sold point-of-sale terminals that merchants used to process transactions when customers paid with a check. The terminals that 4Access sold were designed to send the information needed to process the transaction to only one computer network. 4Access experienced financial difficulties and was going to shut down its computer network, which would have meant that the merchants using its terminals would not be able to process check transactions. To avoid such a problem, arrangements were made to keep the 4Access computer network operational so that the merchants could continue to accept payments by check until they purchased a new terminal. Regrettably, we are writing to inform you of an incident involving the security of the computer network that supported the 4Access terminals.

ITRC20121106-01	<b>Abilene Telco Federal Credit Union</b>	TX		Electronic	Banking/Credit/Financial	Yes - Published #	<b>847</b>

When hackers broke into computers at Abilene Telco Federal Credit Union last year, they gained access to sensitive financial information on people from far beyond the bank's home in west-central Texas.

The cyberthieves broke into an employee's computer in September 2011 and stole the password for the bank's online account with Experian Plc, the credit reporting agency with data on more than 740 million consumers. The intruders then downloaded credit reports on 847 people, said Dana Pardee, a branch manager at the bank. They took Social Security numbers, birthdates and detailed financial data on people across the country who had never done business with Abilene Telco, which has two locations and serves a city of 117,000.

ITRC20121030-08	<b>Advance Auto Parts</b>	FL		Electronic	Business	Yes - Published #	<b>500</b>

An auto parts company is investigating potential incidents of credit card skimming at two of its South Florida stores.

Advance Auto Parts on Northwest 14th Street and 27th Avenue and the store on Northeast 119th Street and Biscayne Boulevard, are believed to have been affected, potentially compromising the credit card information of nearly 500 customers.

A spokesperson for the company releasing a statement: "Advance has no evidence that any customers' payment cards have been misused as a result of this incident. Nevertheless, Advance has notified its payment card processors. As an additional precautionary measure, the company is sending letters to potentially affected customers whom it has been able to identify."

On September 10, 2012, we discovered that two unencrypted computer backup tapes that were created on August 27, 2012 were missing. We immediately started a thorough search and an investigation into what happened to them. We have concluded our investigation and did not find any evidence that the backup tapes were stolen or that the information on the tapes has been accessed or used improperly. Rather, we believe that the tapes were mistakenly thrown away and are now buried in a landfill where they cannot be retrieved.

ITRC20121019-05	Neurocare, Inc.	MA		Electronic	Medical/Healthcare	Yes - Unknown #	<b>0</b>

On behalf of our client, Neurocare, Inc., we write to advise you of an incident involving an unauthorized intrusion by one or more unidentified individuals into Neurocare's computer systems, resulting in the potential compromise of the personal information of Neurocare employees resident in New Hampshire. The incident occurred remotely through a malware attack on a Neurocare CPU located in Newton, Massachusetts. The malware attack appears to have compromised Neurocare's credentials for accessing its account at its third party payroll processor, resulting in unauthorized access into Neurocare's payroll system on or about June 26, 2012. Based on Neurocare's investigation, which is described below, the intrusion potentially exposed certain personal information of approximately 136 Neurocare employees and/or former employees, six of whom are New Hampshire residents, to unauthorized access.

Litton & Giddings Radiological Associates announced a potential HIPAA breach, which may impact the personal health information of 13,000 patients, according to the Healthcare IT News.

The company issued a press release earlier this week, and said the mistake occurred because the janitorial provider at the billing company sent patient billing records to a recycling center without shredding the records first.

So far there is no indication the information has been misused. All affected patients were notified that their names, addresses, dates of birth, diagnosis codes and social security numbers may be vulnerable.

ITRC20120904-01	<b>Temple Community Hospital</b>	CA		Electronic	Medical/Healthcare	Yes - Published #	<b>600</b>

While the intent of a recent laptop theft at Temple Community Hospital in Los Angeles appears to be solely for the computer's physical elements, the act still represents a yet another health data breach that gave a hospital a lot to think about. This isn't the first or last breach, but is a good reminder of why hospitals need to analyze where and how they store data with a broad scope. CT scans of about 600 patients and their names, the reason for the scans and the patients' hospital account numbers were among the pieces of data that were on the computer that was stolen on July 3 from a locked office in the hospital's radiology department.

Sometime between June 1, 2012, and June 4, 2012, there was a break in at Kindred Transitional Care and Rehabilitation-Sellersburg's business office. No one was hurt during the incident and patient care was not affected. On June 4, 2012, Kindred discovered that a safe was missing. Kindred contacted the police department on June 4, and an investigation was conducted by the police department. To date, the safe has not been located. Inside the safe were tapes used by Kindred to back up files containing data relating to past, present and prospective patients at several Kindred facilities.

ITRC20120803-02	<b>Wisconsin Department of Revenue</b>	WI		Electronic	Government/Military	Yes - Published #	<b>110,000</b>

Personal, confidential information from more than 110,000 people who sold homes in 2011 was hidden inside a Wisconsin Department of Revenue report used by real estate and appraisal organizations.

The DOR has ask those organizations to destroy and replace the report, which was posted online for download from April 5 to July 23. The department said that while the information was in the file, it was not visible when the report was opened. However, someone who opened the specific file would have had access to the information, the DOR said.

General Motors said 883 active and retired employees may have had personal information exposed in a security breach, and is working to rectify the situation.

The company said a former employee copied spreadsheets containing names and Social Security numbers.

It has notified potential affected employees and retirees, advising them to place fraud alerts on credit reports, as well as to notify the Michigan Attorney General's Office of any suspicious activity, The Detroit News reported Friday.

ITRC20120727-01	<b>Northwestern Memorial Hospital</b>	IL		Electronic	Medical/Healthcare	Yes - Unknown #	<b>0</b>

Now comes word out of Chicago of a patient health information breach at the hospice offices of Northwestern Memorial Hospital (NMH). According to the hospital, the offices at 676 N. St. Clair Street were robbed of six laptops and tablets on June 11, 2012. By June 15, after reporting the event to the Chicago Police Department and undergoing an internal investigation, the hospital discovered that the devices were in the midst of a software upgrade that left them especially vulnerable to becoming compromised because typical security features were shut off as part of the process.

A hitherto unknown hacking group claimed responsibility for a hacking attack on a county school system in Tennessee that may have exposed the names, Social Security numbers and other personal data belonging to about 110,000 people. The group, which called itself Spex Security, later posted 14,500 of the compromised records online and has threatened to post more. Those affected by the breach include an unknown number of former and current students and employees of the Clarksville-Montgomery County School System (CMCSS).

You shred your personal papers and do as much as you can at home to protect your identity, but once you give your information out, you can only hope the person you give it to is careful. A Sevier County business owner says she's lucky she was the one that found papers with personal information in a dumpster in Sevierville. She called us, someone else could have stolen several people's identities.

ITRC20120605-02	Investacorp, Inc.	FL		Electronic	Business	Yes - Unknown #	0

A vendor of the broker-dealer, National Financial Services (NFS), used by Investacorp was involved in a data security breach. On or around March 12, 2012, Investacorp learned that an NFS vendor had inadvertently shared electronic files with another federally regulated broker-dealer that also uses NFS's services. The incident occurred on November 29, 2011 and was first noticed on February 13, 2012. The information included client names, Social Security numbers, and certain types of account data. Five Investacorp clients from California may have been affected, but the total number of affected individuals nationwide was not reported. The vendor responsible for the mistake worked with the other broker-dealer to delete the client files from their system. Investacorp then received an executed affidavit from the broker-dealer certifying the destruction of the electronic files.

Our Lady of the Lake Regional Medical Center has determined that a laptop computer containing limited health information for former Intensive Care Unit patients was discovered to be missing from a local physician office sometime between March 16 and 20, 2012. An extensive search was initiated as soon as the incident was discovered. Investigation of the incident continues and we have reported this occurrence to law enforcement. We will continue to share updated information. We are sorry this incident occurred and assure our patients and the community that we are committed to protecting patients' personal information.

I am writing to let you know about a privacy issue involving some of your personal information. On January 30, 2012, UnitedHealthcare discovered employee access to information in a database that we since have learned appears to be unauthorized. We believe the unauthorized access occurred from June 28 – December 12, 2011. The information that may have been accessed includes your name, Social Security Number, telephone number, date of birth, address and Medicare Healthcare Insurance Number.

ITRC20120403-05	<b>St. Joseph's Medical Center</b>	CA	2/2/2012	Paper Data	Medical/Healthcare	Yes - Published #	<b>712</b>

On February 2, 2012, we discovered that a storeroom window had been broken at the HealthCare Clinical Laboratory (HCCL) Patient Service Center, and that two storage boxes containing HCCL lab requisition forms were missing from the center. We were able to determine that the missing lab requisition forms related to certain laboratory services provided between December 13, 2011, and January 5, 2012, and also between January 17, 2012, and January 31, 2012. The police were notified of the break-in and resulting missing boxes and a police report has been filed. During our ongoing investigation it was determined on March 16, 2012 that your information was also missing for services received between October 24, 2011 and November 18, 2011.

ITRC20120403-03	<b>Sacramento Area Fire Fighters, Local 522</b>	CA		Paper Data	Business	Yes - Unknown #	<b>0</b>

Between March 5-6, 2012, a spreadsheet containing names and contact information for active and retired Local 522 members was sent by a Local 522 employee to the Sacramento Central Labor Council ("CLC"). The spreadsheet containing this information also contained Local 522 members' social security numbers. This spreadsheet was sent to provide mailing addresses for mailing CLC publications to Local 522 members. It is believed that CLC then forwarded some or all of this information to Capitol Mailing, Inc., who used the information to print mailing labels for the CLC's Sacramento Valley Union Labor Bulletin,

**2012 Breaches Identified by the ITRC as of: 12/26/2012**

**Total Breaches: 447**  
**Records Exposed: 17,317,184**

The ITRC Breach database is updated on a daily basis, and published to our website on each Tuesday. Unless noted otherwise, each report includes breaches that occurred in the year of the report name (such as "2009 Breach List"), or became public in the report name year, but were not public in the previous year. Each item must be previously published by a credible source, such as Attorney General's website, TV, radio, press, etc. The item will not be included at all if ITRC is not certain that the source is real and credible. We include in each item a link or source of the article, and the information presented by that article. Many times, we have attributions from a multitude of media sources and media outlets. ITRC sticks to the facts as reported, and does not add or subtract from the previously published information. When the number of exposed records is not reported, we note that fact. When records are encrypted, we state that we do not (at this time) consider that to be a data exposure. However, we do not consider password protection as adequate, and we do consider those events to be a data exposure.

What is a breach? A breach is defined as an event in which an individual's name plus Social Security Number (SSN), driver's license number, medical record, or a financial record/credit/debit card is potentially put at risk – either in electronic or paper format.

The ITRC Breach Report presents individual information about data exposure events and running totals for the year. The ITRC Breach Stats Report develops some statistics based upon the type of entity involved in the data exposure.

This project was supported by Grant No. 2007-VF-GX-K038 awarded by the Office for Victims of Crime, Office of Justice Programs, U.S. Department of Justice. Points of view in this document are those of the ITRC and do not necessarily represent the official position or policies of the U.S. Department of Justice.
