

ECPE 174 – Fall 2011
PreLab Format

Pre-lab write-ups must be typed up and turned in by the start of lab via Sakai. You should submit a Word document. You can hand-draw any diagrams or circuits needed for the prelab, capture them electronically (either photo or scanned), and include them in the Word document. You should not turn in any paper on the day of class.

You must include the followings in your pre-lab write-up:

- Problem Summary: You must restate the design problem in your own words; do not copy the lab assignment. Briefly state what the design is to accomplish.
- Design Approach: Answers to the pre-lab questions presented in a clear and organized fashion.

These two sections will form the beginning of your lab report so make sure you organize, write, and save the pre-lab with that in mind.
